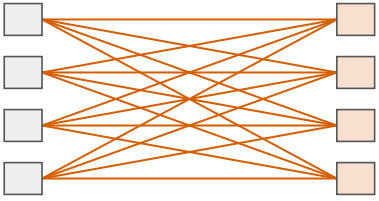
(a) Standard

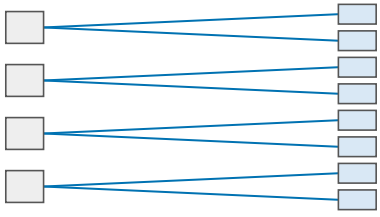


Every output reads every input.

Weights: $C_{in}C_{out}K$

$32 \times 32 \times 15 = 15{,}360$ (spec block)

(b) Depthwise, $D = 2$

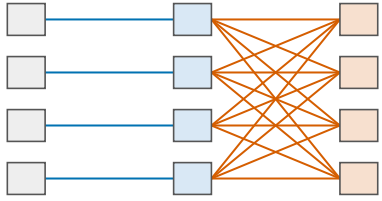


Each input has its own D filters.

Weights: $C_{in}DK$

$16 \times 2 \times 2 = 64$ (spatial layer)

(c) Depthwise separable



Filter each channel, then mix (1×1).

Weights: $C_{in}K + C_{in}C_{out}$

$32 \times 15 + 32 \times 32 = 1{,}504$
